

Did you know that...

- * Over 8,000 vehicles per day go over McDonald Bridge to 8th Street?
- * Recommended volume on “Low Volume Collectors”, i.e. McDonald, Spiller, 8th St. & 19th Ave. is 1,500 to 5,000 vehicles per day?
- * Recommended maximum volume on “Residential Streets”, i.e. 21st Ave. is 1,500 vehicles per day.
- * Vehicle traffic in Ramsay does not significantly decline on weekends?
- * Speeds in excess of 100 km per hour have been recorded on 6th Street northbound off Spiller Road?
- * Streets with high traffic volume attract illegal activity such as drug trafficking and prostitution?
- * Communities with easy access and egress also attract illegal activity such as drug trafficking and prostitution?
- * The new Water Centre and other city buildings planned for 25th Avenue have the potential to increase traffic volumes within Ramsay by approximately 1,000 vehicles per day by 2023?
- * Approximately 10% of vehicles on 18th Avenue go the wrong way?
- * A community with calm traffic flow is a pedestrian friendly community?
- * Our 2004 data is likely outdated and may underestimate actual 2005 volumes by as much as 40%?
- * Ramsay was involved in a traffic calming process in 1994?
- * Community volunteers have put in over 2,000 hours to research the issues and communicate with the community and city representatives?
- * Lack of community response to the current traffic calming initiative will remove Ramsay from the process for about another ten years?
- * Doing nothing will not preserve community access and egress for residents considering the ever-increasing traffic volume?
- * Your input is valuable during this process? An opportunity to meet with the committee is planned for September 6th at 7 PM (General Meeting) as well as September 10th at 1 PM (the following Saturday).

Traffic Calming Timeline

(tentative schedule)

RAMSAY TRAFFIC STATISTICS – MAY 2004
